

## SUBJECT INDEX

- Absorption, percutaneous, of drugs, and physicochemical properties, 371
- Acrylate polymer in unique sunscreen formulation, 541
- Aerosols, emulsions and foams, relationship between properties of, 87, 623
- Allergens, bioassay of, in guinea pig, 151
- Allergy, hypersensitivity and cosmetics, 423
- Aluminum, antiperspirants containing, laboratory evaluation of efficacy of, 281
- antiperspirants containing, rat foot pad as model for examination of, 677
- Androgens, metabolism of, by human scalp skin, and male pattern baldness, 523
- Animals, eyes of, experimental, slit-lamp examination of, 163, 181
- in safety testing of cosmetic products, 135
- See also names of specific animals.
- Antimicrobial agents as contact skin sensitizers, 399
- Antiperspirants, containing aluminum, laboratory evaluation of efficacy of, 281
- critical evaluation of methods available for measurement of antiperspirancy, 245
- rat foot pad as model for examination of, 677
- Antiseptic, properties and uses of chlorhexidine, 259
- Bacteriostats, rapid liquid chromatography of, 363
- Baldness, male pattern, and metabolism of androgens by human scalp skin, 523
- Benzene, meta difunctional derivatives, in oxidative hair dyeing, 103
- Binding agents, evaluation of, and effect on pressed powders, 357
- Bioassay of contact allergens in the guinea pig, 151
- Biochemistry of skin, effect of soap on certain aspects of, 473
- Biological effects of topical application of skin lightening compounds, 727
- Blending of components, high-accuracy control of, 593
- Capsule technique, for laboratory evaluation of efficacy of aluminum-containing antiperspirants, 281
- Chlorhexidine, formulation and properties of, 259
- Chromatography, analysis of essential oil from *Cedrela odorata* L., 747
- gas-liquid and thin-layer, determination of trace components in D and C Red No. 37, 551
- liquid, of bacteriostats, 363
- separation of cosmetic products and raw materials with aid of urea, 753
- Combing force, quantitative characterization of, 773
- Computers, assisted product development, 783
- multiple regression analysis in study of physicochemical properties and percutaneous absorption of drugs, 371
- Cosmetics, animal, human, and microbiological safety testing of, 135
- in-line, continuous mixing and processing of, 639
- instrumental evaluation of effects of, on skin surfaces with particular reference to smoothness, 693
- microbial control of, 65
- modern concepts of preservation in, 663
- and raw materials, chromatographic separation with aid of urea, 753
- and skin irritancy, mouse ear test and human patch test procedures for, 217
- slit lamp use for ocular irritation studies, 163
- techniques for microbial control in manufacturing plants for, 655
- types of hypersensitivity caused by, 423
- Creams, melting characteristics of, 737
- Dandruff control preparation, laboratory and clinical evaluation of, 395
- Dentifrices, therapeutic, interfaces of laboratory and clinical assessment of, 815
- Deodorants, use of chlorhexidine in, 259
- Deposition of small particles, surface forces involved in, 709
- p*-Diamines, reactions of, with resorcinols, *m*-diamines, and *m*-aminophenols, in oxidative hair dyeing, 103
- Digital control of component blending, 593
- Droplet size distribution, effect of surfactant migration on, 797

- Drugs, physicochemical properties and percutaneous absorption of, 371  
See also Pharmaceuticals.
- Dyes, D and C Red No. 37, chromatographic determination of trace components in, 551  
for hair, role of meta difunctional benzene derivatives, 103
- Ear, of mouse, test for primary irritation of skin, 217
- Emulsifiers, water-in-oil, study of metallic soaps as, 763
- Emulsion, aerosol, and corresponding foams, relationship between properties of, 87, 623  
effect of surfactant migration on stability of, 797  
terminology (letter to editor), 213
- Enzymes, effect on stratum corneum, 493
- Essential oils. See Oils.
- Extrathermodynamic approach in study of physicochemical properties and percutaneous absorption of drugs, 371
- Eyes, animal, experimental, slit-lamp examination of, 163, 181  
irritation of, responses in man and laboratory animals, 685
- Fluoride-containing dentifrices, interfaces of laboratory and clinical assessment of, 815
- Foams and emulsions, relationship between properties of, 87, 623
- Foot, health and hygiene of skin of, 43  
pad of rat, as model for examining antiperspirants, 677
- Force needed to comb trees of hair, quantitative characterization, 773
- Fractional distillation in analysis of essential oil from *Cedrela odorata* L., 747
- Germicidal agents, cationic, synergistic effects of nonionic surfactants upon, 577
- Grading scales for induced pathological changes in experimental animal eyes after slit lamp examination, 181
- Guinea pig, and bioassay of contact allergens, 151  
evaluation of predictive patch tests for contact sensitizers on, 423
- Hair, dyes for, role of meta difunctional benzene derivatives, 103  
evaluation of products for, 561  
quantitative characterization of combing force for, 773  
scanning electron microscopy for evaluating products for care of, 609
- Hair sprays, spreading of resin solutions on hair, 501
- Hands, evaluation of preparations for care of, 31
- Hexachlorophene, safety of, in animals and humans, 291
- Histopathology of wrinkles, 81
- Humans in safety testing of cosmetic products, 135
- Humidity and temperature influence on stratum corneum and relation to skin chapping, 239
- Hypersensitivity and use of cosmetics, 423
- Illumination techniques for slit-lamp examination of experimental animal eyes, 163
- Irritation, of eyes, studies relating to responses in man and laboratory animals, 685  
ocular, observation using slit-lamp, 163  
primary, of materials on skin, animal and human methods, 385  
primary, of skin, mouse ear test and human patch test procedures, 217  
of rat skin, in study of effect of soap on biochemistry of skin, 473
- Lipids, layer on skin surface, formation of, 331  
synthesis in rat skin, effect of soap on, 473
- Lotions, hand-care, evaluation of, 31
- Manufacturing plants, techniques for microbial control in, 655
- Melting characteristics of ointment and creams, 737
- Microbial growth, control of, in cosmetics, 663  
control of, in manufacturing plants, 655  
as hazard to foot health and hygiene, 43  
in raw materials, topical and oral products, methods for counting and testing of, 65  
and safety testing of cosmetic products, 135
- Microscopy, electron, scanning, for evaluation of hair care products, 609  
electron, scanning, in evaluation of unique sunscreen formulations, 541
- Migration of surfactant, effect on stability of emulsions, 797
- Mixing, continuous, in-line, and processing of cosmetic products, 639
- Moisture, absorption by skin of foot, influence on health, 43
- Monkeys, eye irritancy in, 685
- Mouse ear test for primary irritation of skin, 217
- Nail lacquers, computer-assisted formulation of, 783
- Nucleic acid, deoxyribo-, synthesis in rat skin, effect of soap on, 473
- Occlusion of sweat duct in study of function, 15
- Odorant and olfactory cells, interaction between, 307
- Oils, essential, from *Cedrela odorata* L., composition of, 747
- Ointments, melting characteristics of, 737
- Olfactory cells and odorant, interaction between, 307
- Oral hygiene, chlorhexidine use in preparations for, 259
- Particles, small, surface forces in the deposition of, 709

- Patch testing, on guinea pigs and man, for contact sensitizers, 423  
human, in study of primary irritation of skin, 217
- Pharmaceuticals, microbial control of, 65  
slit lamp use for ocular irritation studies, 163  
See also Drugs.
- Phoreography, new method of determining effect of uv radiation on skin, 3
- Powders, pressed, effect of chemical binders on, 357
- Preservatives, adequacy of, in cosmetic products, 135  
capacity of shampoos, 229  
contact skin sensitization studies on microbials used as, 399  
for cosmetics, effectiveness of, 663
- Processing of cosmetic products, 639
- Rabbits, eye irritancy in, 685
- Radiation, uv, phoreography as new method of determining effect of, on skin, 3
- Rats, foot pad of, as model for examining antiperspirants, 677  
in studies on irritancy and stinging potential, 385  
in study of effect of soap on certain aspects of skin biochemistry, 473
- Rotating hair stage in scanning electron microscopy for evaluating hair care products, 609
- Safety testing of cosmetic products; animal, human, and microbiological, 135
- Scalp, metabolism of androgens by skin of, 523
- Sebum, quantitative differentiation of excretion of, using physical methods, 331
- Sensitization, contact, data for antimicrobial agents, 399
- Sensitizers, potential, bioassay of, in guinea pig, 151
- Shampoos, assessment of preservative capacity of, 229
- Skin, affinity to, of *N*-1-naphthyl-*N'*-phenylenecarboxyalkylureas as suncreening substances, 317  
biological changes due to topical application of compounds for lightening of, 727  
chapping of, influence of temperature and humidity on stratum corneum, 239  
condition of hands, evaluation of preparations for, 31  
effect of enzymes on stratum corneum, 493  
effect of soap on certain aspects of biochemistry of, 473  
of foot, health and hygiene of, 43  
formation of lipid layer on, 331  
of human scalp, metabolism of androgens by, 523  
irritancy and stinging potential of materials, 385  
phoreography as new method of determining effect of uv radiation on, 3  
primary irritation of, mouse ear test and human patch test procedures, 217  
sensitization and antimicrobials, 399  
surfaces, instrumental evaluation of effects of cosmetic products on, with particular reference to smoothness, 693  
use of chlorhexidine for disinfection of, 259  
and water studies, 197  
wrinkle, and nonwrinkle, comparison of histopathology of, 81
- Slit lamp, for examination of experimental animal eyes, grading scales and photographic evaluation of induced pathological conditions, 181  
for examination of experimental animal eyes, illumination techniques and the normal animal eye, 163
- Soap, effect on certain aspects of skin biochemistry, 473  
metallic, as water-in-oil emulsifiers, 763  
Society of Cosmetic Chemists, Great Britain, committees for 1972-73, 2  
IFSCC Award, 279  
Medal Lecture, 539  
Officers and Council for 1972-73, 1  
Publications Prize, 79  
Society of Cosmetic Chemists, U.S.A.  
IFF Award, 606  
Literature Award, 196  
Medal Award, 102  
Officers for 1973, 86  
Perry Brothers Award, 608  
Shaw Mudge Award, 607
- Sodium laurate in soap, effect on biochemistry of rat skin, 473
- Stability of emulsions, effect of surfactant migration on, 797
- Stinging potential of materials on skin, animal and human methods, 385
- Sunscreens, laboratory and human exposure evaluation of unique formulations, 541  
*N*-1-naphthyl-*N'*-phenylenecarboxyalkylureas as, with affinity to skin, 317
- Surface forces in deposition of small particles, 709
- Surfactants, migration of, effect on stability of emulsions, 797  
nonionic, synergistic effect of, upon cationic germicidal agents, 577
- Sweat, disposal from footwear, 43
- Sweat glands, partial sweat duct occlusion on study of function of, 15  
in study of phoreography as method for determining effect of uv radiation on skin, 3
- Synergism, effects of nonionic surfactants upon germicidal agents, 577

- Temperature and humidity influence on stratum corneum and relation to skin chapping, 239
- Toxicity, acute and long-term, and biological changes due to application of skin lightening compounds, 727
- Triethanolamine myristate-Freon propellant systems, relationship between properties of emulsions and foams of, 87
- mineral oil-Freon propellant systems, relationship between aerosol emulsions and foams from, 623
- Ultraviolet, analysis in evaluation of unique sunscreen formulations, 541
- radiation on skin, phoreography for determination of effect of, 3
- Ureas, *N*-1-naphthyl-*N'*-phenylenecarboxyl-, as sunscreens substances with affinity to skin, 317
- use in chromatographic separation of cosmetic products and raw materials, 753
- Water, and relationship to skin, 197
- as source of contamination in cosmetics manufacture, 655
- Wettability of hair fibers by hair spray resin solutions, 501
- Wrinkles, histopathology of, 81
